

MUHAMMED M. MUSTAFA

Software Engineer | Frontend-Focused Full-Stack | React, TypeScript, Node.js

Suez, Egypt (open to remote) | muhammedelruby@gmail.com | github.com/Sboonny | linkedin.com/in/sboonny

PROFESSIONAL SUMMARY

Frontend-focused full-stack TypeScript engineer; full-time at freeCodeCamp from Jul 2022 to Oct 2023. **Merged 373 pull requests into freeCodeCamp/freeCodeCamp in 2022–2023, the most of any human contributor in that period, and 560 across GitHub**, all peer-reviewed and public. Built the platform's right-to-left (RTL) layout for Arabic learners, shipped endpoints for its new Node.js/Fastify + Prisma API, and helped move the UI from React-Bootstrap to a Tailwind CSS / Radix UI component library.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Redux, Next.js, HTML5, CSS3 (Flexbox, Grid, logical properties), Tailwind CSS, Radix UI, responsive design

Backend & APIs: Node.js, Fastify, REST APIs, GraphQL, Apollo, Prisma, PostgreSQL, tRPC, Sentry

Testing & Quality: Jest, React Testing Library, Cypress, Storybook, ESLint, Prettier, code review

Internationalization & Accessibility: Right-to-left (RTL) layouts, i18n, Arabic localization, semantic HTML, screen-reader-friendly forms

Tools: Git, GitHub, Gitpod, VS Code, Chrome DevTools

Languages: Arabic (native), English (full professional proficiency)

PROFESSIONAL EXPERIENCE

Software Development Consultant (Full-time) | freeCodeCamp | Remote **Jul 2022 – Oct 2023**

Open-source learning platform. Worked across the React/TypeScript client, the Node.js API and the Chapter events app. Hired full-time after contributing as a volunteer from spring 2022.

- Merged [373 pull requests](#) into freeCodeCamp/freeCodeCamp in 2022–2023 across the React/TypeScript client, the new Node.js API and shared tooling; each was reviewed and approved by the core team before merge.
- Built the platform's right-to-left (RTL) layout for Arabic learners and extended it across the product in ~20 follow-up pull requests (details under Selected Projects).
- Helped migrate the client from React-Bootstrap to an in-house Tailwind CSS / Radix UI component library, one component at a time, while the site stayed live.
- Implemented REST endpoints for the new Node.js/Fastify + Prisma API that replaced the legacy server, added Sentry error monitoring, and retired deprecated endpoints.
- Delivered 144 merged pull requests to Chapter, freeCodeCamp's self-hosted event-management app for nonprofits (Next.js, Apollo GraphQL, PostgreSQL).
- Wrote tests for new API routes and maintained the client's Cypress end-to-end suite (e.g. [PR #50423](#), [PR #49427](#)).
- Refactored deprecated front-end code into typed React components (e.g. split the challenge editor's lower panel into sub-components), removed unused libraries and CSS, and kept tooling current (Prisma v5, Prettier, ESLint).
- Maintained freeCodeCamp's Node.js libraries, reviewed community pull requests, and contributed to the team's security and data-storage strategy.
- Mentored teammates and open-source contributors through pair programming, and helped define the roadmap and feature priorities.

Frontend Developer (Freelance) | Self-employed | Suez, Egypt **Mar 2021 – Jun 2022**

- Delivered front-end web development work for clients as an independent developer.

ACHIEVEMENTS

- Most merged pull requests of any human contributor to freeCodeCamp/freeCodeCamp in 2022–2023 (373).
- Recommended by freeCodeCamp founder Quincy Larson, who managed him directly: "a consummate developer with an encyclopedic knowledge of full stack development."
- Temporary Arabic language lead for freeCodeCamp; moderator of the freeCodeCamp forum and Discord community.

SELECTED PROJECTS

Right-to-Left (RTL) Layout for freeCodeCamp.org

2022 – 2023

Tech: React, TypeScript, CSS logical properties, Flexbox, Grid

Code: github.com/freeCodeCamp/freeCodeCamp/pull/48287 | [all RTL pull requests](#)

- Added right-to-left support to a float-based client that had none, so Arabic learners get a native interface: mirrored navigation, RTL typography, direction-aware icons and a root dir attribute. Then extended it to the code console, profile, search, challenge tables and code blocks.
- Replaced floats and physical-direction spacing with Flexbox, Grid and CSS logical properties ([PR #48769](#)), so components work in both directions without per-direction overrides.

freeCodeCamp API (Fastify + Prisma)

2023

Tech: Node.js, Fastify, Prisma, TypeScript, Sentry

Code: github.com/freeCodeCamp/freeCodeCamp (15 merged API pull requests)

- Implemented endpoints for the API that replaced the legacy server: saving challenge progress, profile and settings updates (about, social links, keyboard shortcuts, honesty policy), email validation and email subscriptions. Deprecated a legacy account endpoint.
- Added error monitoring with a Sentry Fastify plugin ([PR #49731](#)), enabled Prisma's JSON protocol, and upgraded Prisma to v5.

UI Component Library and Bootstrap Migration

2022 – 2023

Tech: React, TypeScript, Tailwind CSS, Radix UI, React Testing Library

Code: github.com/freeCodeCamp/freeCodeCamp (ui-components pull requests)

- Built reusable components (FormGroup, ControlLabel, Panel, Row/Col grid, download button) with theme support and a system color palette, and documented how to add packages to the library.
- Replaced React-Bootstrap panel, list-group, image and progress-bar components across the client with in-house equivalents ([PR #52011](#), [PR #52372](#)).

Chapter: Event Management for Nonprofits (1.9k GitHub stars)

2022 – 2023

Tech: Next.js, React, Apollo GraphQL, PostgreSQL, TypeScript

Code: github.com/freeCodeCamp/chapter (144 merged pull requests)

- Built dashboard search, paginated queries with totals, lazy-loaded chapter lists, invite-only events, and venue management (deleting a venue moves its events to "TBD").
- Improved accessibility with fieldset/legend grouping for screen readers in event forms, and upgraded the GraphQL package to v16.6.

OPEN SOURCE CONTRIBUTIONS

- **t3-oss/create-t3-app:** [9 merged pull requests](#) fixing RTL layout bugs in the documentation site and writing and proofreading the Arabic documentation.
- **mui/mui-x:** added developer warnings to the DataGrid when autoPageSize is combined with autoHeight ([PR #11554](#), [PR #11585](#)).
- **typehero/typehero, argyleink/transition.css:** fixed checkboxes on challenge cards triggering navigation ([PR #1322](#)); added "cinematic" wipe transitions ([PR #31](#)).
- **freeCodeCamp Arabic:** translated freeCodeCamp articles and policies into Arabic ([archive](#)) through the Crowdin localization workflow.

EDUCATION & CERTIFICATIONS

Bachelor of Technology (B.Tech), Business and Information Management

2015 – 2020

Suez Institution for Business and Information Management, Suez, Egypt

Total TypeScript: TypeScript Generics (2024); Type Transformations (2023)
